

ADN-1 Active Forensic Defence

Why This Programme Exists

Retail theft in the UK cost **£4.2 billion** in 2024/25 — approximately 55,000 incidents every day. Independent retailers absorb a disproportionate share of this loss with the fewest resources to fight back. Every existing solution either signals the loss after it has already happened, or costs £5,000+ per installation and is designed exclusively for large enterprise retailers.

The ADN-1 is built on a different logic entirely. It does not try to catch the thief. It makes the stolen goods commercially worthless — eliminating the economic incentive that drives organised retail crime at source.

What the ADN-1 Does

- **Detects** bulk shelf sweeps in real time using dual Time-of-Flight laser sensors — no camera, no facial recognition
- **Deploys** an invisible synthetic DNA forensic mist onto stolen goods within 200ms of the trigger event
- **Logs** a cryptographically secured Forensic Digital Twin — timestamped, tamper-proof, cloud-registered
- **Sterilises** stolen goods in the Toxic Inventory Registry, blocking resale on eBay, Facebook Marketplace, Vinted and more
- **Deters** future theft as word spreads that items from your store cannot be sold

In Plain Terms

Thieves steal to resell. If they cannot sell it, there is no point stealing it.

No alarms. No confrontation. No risk to your staff. The ADN-1 works silently, automatically, and permanently — making your stock economically toxic to anyone who steals it.

Alpha Pilot Terms

Hardware Setup Fee	£149 one-time — includes ADN-1 node, mounting bracket, full installation
Monthly Subscription	£40/month — cloud registry, Forensic Digital Twin logging, Toxic Inventory enforcement, firmware updates
Minimum Commitment	3 months (£149 + £120 = £269 total minimum outlay)
Number of Nodes	1 node per high-risk product zone; multi-zone discount available
Installation	Tool-free under-shelf bracket; 5V USB-C or 12V DC power; 30 minutes on site
Pilot Start Date	Rolling — available Q2 2026 subject to hardware availability
Support	Direct founder-level support throughout the Alpha phase

*Pilots are **paid, not free**. Retailers who invest have a genuine stake in the outcome — and provide the real-world data that makes the system better for every retailer who follows.*

What You Get as a Pilot Retailer

During Your Pilot

- ADN-1 node installed and configured for your product zone and risk profile
- Sensitivity mode calibrated to your store type (HIGH for jewellery/off-licence, STANDARD for convenience)
- Staff briefed on the PIN-authenticated override and inhibit protocol
- Live dashboard access to your Forensic Event Log from day one
- Direct support line to the Mykei founder team throughout the pilot period
- Full Forensic Event Package reports — usable as evidence for insurance claims

After Your Pilot

- Published case study data showing your theft reduction (anonymised if preferred)
- Priority renewal pricing and multi-node discount for expansion
- Early access to the React Native companion app (Q3 2026 release)
- Reference inclusion in BIRA sector communications (if agreed)
- Input into product development — Alpha retailers shape what the ADN-1 becomes

How to Join the Alpha Pilot

Step	Action	Timeline
1	Complete the Letter of Intent (attached) Sign and return to protocol@mykei.io	Now
2	Site assessment call with the Mykei founder Confirm product zones, sensitivity mode, installation date	Within 5 days of LOI receipt
3	Hardware deployment and staff orientation ADN-1 installed, configured, and live	Within 14 days of confirmed date
4	Pilot period begins Live monitoring, support, Forensic Event Log active	3-month minimum from install
